

MYRAH
Children rescues

Q: *what have you been working on, lately, and how everything works when they pull the children out of the tunnels, how do you move them from place to place...*

Myrah: I have been waiting to say all these things, everything you can know, our troops have been working very hard, Thor Han hasn't told you everything because he couldn't, I am not going to tell you everything either because I would be fired but what I can tell you is that our troops have been working very much with your troops under the surface of your planet and a lot of operations have been going on since a year, we have connected with your troops, with your secret military, this military which is in contact with your good people, your good faction of government and those troops linked with ours from the federation, only humanoids because the conditions under the ground you need to be fit for it and our humanoids Ummites and Taals, Metons as well we're here and still are, the Taals are the more performant because they have the most common genome with your species, not that they are related, but it is compatible, well, enough talk about genome, all these operations and that are still going on are made to liberate all the prisoners, the prisoners are liberated every day, some more are taken but less and less abductions, we are fighting on every front, in your secret services, not the old corrupted ones but the new ones, your people are working to cleanse all the web of trafficking, this is your work among your people, our work is to give you a hand by force, you take the decisions, and you conduct your own operations, we just assist when you ask, we are assisting you, fighting in the tunnels, this is a very difficult job, a lot of us are dying and a lot of yours are dying, a lot of the enemy is dying too, we do not like to kill, we do it if we have no choice, most of the communications between underground bases are cut, still some are linked, but this is soon sorted, what we have liberated is a lot of entities, human prisoners are all back on Earth, they never left Earth, all the human Terran prisoners we've liberated have been re-dispatched in centres on Terra to be taken care of and healed.

Q: *Is it children and adults?*

Myrah: It is all ages, well there aren't any elderly, I would say in your Terran years the ages stop around 40 and something because they want healthy humans for trafficking or experimentation and all have to be healthy and younger performant. All those who belonging to Terra are being taken care of in your Terran centres on Terra, nobody knows, nobody must know where they are for security and for their safety because they can talk, and they are talking, those who still can't talk, they are talking, and they are in danger, so they are protected, rehabilitated when possible in the society of Terra.

Q: *And who rehabilitates them, are you doing the rehabilitation or do you have regular humans doing that?*

Myrah: No, it is your people doing it, you take care of your people, we take care of hybrids, what is not your people, all hybrids are evacuated towards the science outpost on orbit, this I can tell because now it is safe.

Q: When they get to the science station what happens there, and who helps you at the science station?

Myrah: They arrive with our military ship, and they are dispatched in different medical facilities within the orbital station, it depends on their genome, we have different posts where we have equipment regard to the different races hybridized with them, they are all hybridized with Grays but different types of Grays, and it is different technologies used to rebalance them, I would say, to liveable state, when they can survive and stabilize their system, we have four different posts where they go, and they are dispatched, and we take care of them, by taking care of them, it is really, believe me, it has been like a factory, it has been a relentless work, it was very tiring, I know this wave has been dispatched towards other systems, but now it is not over, we are still waiting for another wave of liberation, when they arrive first they are put into a different stasis that is regenerative, all their trackers are removed and then systems are purged from what we call the Goo, it is a word that best describes what they are filled with, it is a life support system that the Grays use, that erases consciousness, it just maintains you alive, but you all shut down, this must be evacuated from their system.

Q: You are saying then that they're in pods with Goo underground, and they're not in metal cages?

Myrah: The humans destined to slave trafficking are in cages and the humans destined to genetic experiments are in pods or in the waiting in cages, but they are in pods because they go and take the subjects they want from the cages, so the genetic experiment facilities are always composed with pods and different liquids, different what we call Goo regard to the system, the genome, so this needs to be evacuated from the system and replaced by a life support gel, and when it gets better the life support gel is cleansed, and they can breathe because this life support gel is slowly, slowly injected with molecules of air that they can breathe, when they are ready we evacuate the gel from their system and activate the lungs and the breathing system, this is quite painful for them, but this is very quick, then the more difficult work begins because they've regained a consciousness that was maintained in a dormant state, locked down, and now their consciousness is alive, they are aware, and they panic.

The only thing they were able to see for those who had the ability to see were Grays, and so they see humans for the first time, and they panic, all of them, they don't know what's happening to them, so as soon as they wake up we put them under mind filling device, this is going to fill their mind with waves that are going to calm them down, relax them and through these waves we pass on data and information, and this data and information is going to teach them how to speak language, language takes a few days, it depends on the subject to be learned for the first time, they need to activate their vocal cords, they hear, and they see, they smell, it is very traumatic for them and this is a very difficult work for us. We are teaching them the language used commonly by the whole federation which is the diplomatic language which is Taami. They are ready after a while, it depends on the subject of course because the hybridization are on different stage, for some it is very difficult, some of them are in a level of genetic alteration that is not allowing them to go back to a normal life as we conceive it, so these ones will be kept in pods and I do not know what is decided with these ones, if they are not able to live will end up their life, sometimes it is better.

Once they're able to talk, to breathe and become quiet, of course we drug them because the trauma is easier to deal with, then we teach them how to walk, we inject substances in their muscles and sound technology that is activating their muscles, then they start to walk, it is a long process, then they start to eat, some of them don't need to eat, they are more Gray as you say technology than human, we provide for the needs of every each of them, average of them is different, and we need to really study them to see what they need, what their system is able to absorb, what their system need to live, consciousness is activated, body functions are activated, they start to walk, many, many workers are humanoids on the science station, so this is a problem because they are scared of us, we need to put them in trust, they go naturally towards Emerthers and Egaroth because they look like them, but you know this is difficult.

Q: So have you reached out to those races to see if they can come and help?

Myrah: Yes, we have many, many other races of scientists from different populations who come and help. Egaroth are great with children, really great with them, so we have Egaroth scientists because you need to be qualified, not everyone can come at their contact, it could spoil all the efforts, when children are ready to socialize and are not afraid of humanoids anymore, we insert them in some sections of the station where there is life, they eat with us, they play with our children, and they start to socialize, once socialization stage is validated they're ready to go, there are adults as well, the adults have more difficulty to socialize because they've been in the pods so long, they've grown up all their life in pods, muscular activation is more difficult, so now all the children have gone, some adult hybrids are left still to be taken care of, but I'm done for the moment, I've been accompanying the last colony of children to Selos, so now I am tired, and I've been granted rest with my husband and my children.

Q: I know you adopted one of them, so tell us how she's adjusting, what have you noticed, what have you learned from her?

Myrah: She's amazing, she's a wonderful child, I named her Gaia because she was born on Terra and I know some a lot of Terrans like to call this planet Gaia because Gaia for the Terrans is the name of the soul or the consciousness of Terra, I like it, it is an ancient goddess of your folklore, Gaia is my child, now, I have adopted her because I wanted to learn from her, and she is teaching me a lot, you need to know this, these hybrids, they are an upgrade of human and of Grays, they have worked at upgrading and creating super race that they are using for different despicable purposes but those we've saved are extremely talented and evolved beings, Gaia doesn't speak or very few, she could speak, but she rather communicates by mind talk, I love her, she is an amazing child, she would scare you maybe if you see her, but I find her beautiful, she plays a lot with my sons and my husband likes her as well, she is talented for pictural arts, she speaks through pictorial art, we give her art material, and she composes shapes, lights and colors through which she communicates from her soul, it's thought art, she is very skilled, we are actually studying her because she stayed here, and she is willing to help us understand, but she wants as well to understand who she is, so we are helping her as well by understanding her she understands who she is, she is very kind, very gentle, she's never known hate, intolerance, discrimination, she's never known that, so she is a very peaceful child, her heart is filled with light, love and consciousness, she is very conscious.

I know she can communicate with beings on higher planes, she can see what is happening on the other side of the universe, she has the sight, she's fantastic, and they're not all like her but a lot of them are like her, this is Gaia.

Q: *Do you think that the other hybrids will end up like her as good as she is or do you think it's really going to be based on an individual basis?*

Myrah: It is individual basis where you have constants, we have determined three threads three constants, hybrids children like her extremely talented and evolved beings, and those as well who don't have all these talents but who are able to be inserted normally in a society, and the third constant is those who have difficulties, who have alteration and do not communicate, do not behave in a reasonable way in a society, they are not able to be reinserted, these ones really cause problem, we've been evacuating them as well towards other facilities who will treat them.

Q: *Do you feel like the humans that are being helped that were in the cages, do you think that they're going to end up in the same three buckets as the hybrids were?*

Myrah: No, none of them have special abilities. There are people like the average Terran, I would say two categories, the one who can be reinserted in a normal life, well, never normal, reinserted in life and those who won't for different reasons psychological damage and or physical damage.

Q: *Did you provide them with technology to heal their mind, like to mind a race and then place fake memories?*

Myrah: We do not give erasing memory devices because your people would use it in a bad way, we are not allowed to give this technology, but we are giving healing devices with waves and sound. We have given your medical teams these devices, we do not give technologies that can be used for destructive purposes.

Q: *Can you tell us any positive stories you have witnessed of the children's recoveries perhaps them learning to trust, to smile, to make friends, learning to walk, they're feeling free and safe?*

Myrah: We let them go only when they feel safe with humanoids because they are going to be reinserted in societies close to their genomes, we cannot allow them to be reinserted in societies linked to their Gray genome because these beings are not good, so we reinsert them either with the Egaroth or either with humanoid societies, you are asking some anecdotes, let me think, these children are very curious, they do not know boundaries, boundaries have not been taught to them, so they need to experience them, it is very difficult to teach boundaries to a child and even not only children, adults, adults are hybrids are also like children, they have a children's mind, so it is the same, so they go everywhere, they do not know about boundaries, they are all under surveillance but at a certain stage we leave them on their own device roaming on the station and sometimes there are funny situations, there are so many stories, so many stories, I don't have one in mind.

Q: How are the hybrid children different compared to the Terran children mentally, physically, intellectually, energetically and spiritually?

Myrah: Well, physically it's very obvious, they are a cross-breed between Terran human and some different Gray species, so they have different sorts of shapes in between the two species, visually they look sometimes close to Gray appearance and sometimes close to human appearance, and there's so much a variation of their shapes and appearances, mentally as I was explaining they are like newly born, they need to learn everything, psychologically they are extremely vulnerable, spiritually they do not have spirituality, they need to learn how to connect with Source and this comes in time.

Q: That these souls and the children underground have a specific blood type that the regressive strived to manipulate with?

Myrah: They have so many different blood types and mixed with the Grays blood types, so it is just a mess. It doesn't matter.

Q: Are the children being kidnapped off the streets or are they also breeding underground from women held captive, and which one is more frequent?

Myrah: Both, breeding underground for a genetic experiment then you know exactly what you are going to get, the ones are freshly abducted serve more for slave trafficking.

Q: Are these children that are being abducted, children that no one would notice that are missing?

Myrah: No, your people miss them a lot, there have been so many children especially in poor casts of society and countries who have a lot of communication. We all try to find a solution for every one of them.

Q: We have the good military and the bad military in the US, so how do you keep the bad military from finding out from getting to where these children are?

Myrah: Oh, that is complicated, everyone knows and everyone knows we are helping the benevolent factions of your military, there are conflicts unfortunately, but the most of the military was under orders of a leader who was benevolent and acted for this liberation but of course there is an elite, hidden secret for you, elite of military which has never worked with any leaders, and are working with your occupants, Ciakahrr and Maytra, these are the ones we're talking about.

Q: What technology is involved in removing as many children as quickly as possible from the underground?

Myrah: We bring the pods to a beaming area, and we teleport the pods, those who are not in pods are brought on a ship which is in orbit and this ship brings them to the station, the ship of the military of our factions, and they bring them on the station afterwards, beaming is the best way.

Q: Is there anything that we can do to help these children?

Myrah: You can only help your children or your people and see with your services how you can

do and help, contact your governments and ask what you can do. There are associations and groups I think who know how to do this, do your research.

Q: Are you using what we call medical beds to help these children?

Myrah: Well, they first are kept in their pods and then transferred into other pods that we fit with the gel they need to be completely cleansed and rehabilitated with breathable material, then they can transfer their system into breathable air, then they are kept once they're out of the pods on, yes, it is assimilated to medical beds, it is tables or bed as you call them with all the equipment necessary to maintain the being healthy and heal it with different devices all around.

Q: What happens to these children that are all deformed, they still fit in these beds?

Myrah: We all have a standard bed with different equipment regarding the race we are treating, but the structure of the beds are the same, equipment is different.

Q: What type of implants have you encountered, and how did you go about removing or altering them?

Myrah: We're removing implants when they are in the second gel, while they are not yet totally conscious because we never know how they are going to cope as long as we haven't removed all the implants because some trackers are not only tracker signals, they don't need tracker signals, tracker signals are very rare, it is when they need to transfer them from a facility to another facility, so they chip them but most of the time their implants are health monitors, and these health monitors, many of them maintains them life, maintain sentient functions and organs in their body alive, removing them is not a good idea always, so we need to study all the possibilities for all each of them with this implant, how can we remove them? Why do we need to leave them and if we leave them, how can we stabilize them and shift them into something safe? I told you there is a lot of work.

Q: Do you know if orphanages are part of human trafficking?

Myrah: Absolutely, the first source of abductions of course, no traces.

Q: How do you think that the new administration in the United States will affect this whole massive work of healing, bringing and taking everything from the underground?

Myrah: I think our task cannot be interrupted by a bunch of few people from Terra. We have started this operation, and it has been running for a long time now, and it is nearly complete, and all will be well. I am not authorized to tell you anything else. I am watched by my favorite blondie, he's watching what I'm saying, he knows I am not going to delegate anything, he's doing a lot of work you know, he doesn't tell you everything he does, even if that doesn't known, I know, he's very brave.

Q: I know you are extending yourselves so much to help us during this time of growth for the planet, and we're so very grateful, words just can't really explain how much we are grateful for what you are doing.

Myrah: This is touching my heart, and he's hearing this too, and he's feeling grateful, I know, I feel it from his heart. You know we do not do this to seek for recognition and gratitude but

sometimes when we hear nice gentle words, it really is good for the heart, we do our duty, we do what our heart tells us to do what is right, we have the choice, we follow orders but of our free will, we follow orders not because we are bound to our hierarchy, we can leave at any time, we can say no, we follow orders because those who give orders know how to organize, they have the task to organize different people, this is what the hierarchy is for, they are guides, Ardaana is the guide for Thor Han and all the troops and Lo Ren on my station is the guide for all the scientific workers, he organizes the work, and they have responsibilities, it is very difficult for them, so we follow orders with love because we love those who follow orders because we respect them because they organized the work practically and efficiently, and we respect this and honor this, without our superiors the work would be very disorganized and not efficient at all, someone has to do the job, organize for everyone, and it is not easy task, so I wanted to say that and these people have merit as much as those who die in the undergrounds of your planet.

Elena: *That was nice because I love her energy and at the end when it was time to go, you know she's connect with the half part of my body, so the implant just takes over the upper part of my body and at the end Thor Han was at her right, and he moved behind her to go on the left, I don't know, to switch off kind of a device monitor and while passing behind her, he did to our shoulder like a little quick massage, like well done, like something of affectionate, and I felt it, that was nice, so not only she connected to me, me connected to her. I could read her mind if I want, it's a telepathic connection.*
