

March.25.2021

THOR HAN & JEN HAN (first appearance)

Merkabah / Southern Cross & Lyra constellations / Inter-density Procreation / Mercury / Venus / Jupiter / Saturn / Uranus / Nhor music / Off-world spiritualities / Aquatic planets / Jen Han's background and terraforming education.

Does the Metatron cube protect as well as the Merkabah:

Elena: What protects well is the crystal three-dimensional device that generates shape waves, and creates a field. It is also known as the seal of Solomon; he had this seal as a ring that was given to him by extraterrestrials for protection.

Thor Han just announced to me just a few seconds ago that he's not on his own; his younger brother is with him. I didn't know he was even on the station, but it takes them four hours to come, so it's just like for a weekend. Well you see Jen Han is 20 years younger, he looks like Thor Han, it's like the copy of him younger with curly short blonde hair. I don't know exactly his age but he looks like he's barely 20.

Q: Have you ever encountered resting places where souls incarnate to just rest, heal and regain energy?

Thor Han: The soul doesn't need resting, the soul once disincorporated goes to a higher place and waits to decide what they are going to do, healing most.

Q: Are there any advanced life forms around the stars of the Southern Cross Constellation?

Thor Han: Yes, there are many life forms there, not interacting with your star system nor your planet, but there are many life forms in this constellation, life is crawling everywhere in the multiverse, there are six civilizations, four are humanoids, two are based on carbon but not humanoid, a little bit different.

Q: Have you started to rebuild Lyra and will the Galactic Federation have any part in this?

Thor Han: The constellation you call Lyra harbors an infinity of life forms and is very much inhabited, there are a lot of life and civilizations of different levels in this area of your galaxy.

Q: Interdensity procreation:

Thor Han: You cannot reproduce, if the densities of existence are different, because the act of reproduction involves two biological bodies on the same frequency and vibration, otherwise the act of copulation cannot be performed.

Q: Does the planet Mercury has any special chemicals or materials that would benefit Terra, does Pluto have life?

Thor Han: All the planets of your system have resources who can benefit everyone, minerals

and gases, also liquids on some planets, most of the planets and their satellites are habitable. There is an infinity of life forms already in your star system that you do not know about. Mercury doesn't have any life form neither the planetoid you call Pluto, but there are mining outposts of the Federation. We are mining the necessary minerals to supply our ships when it is needed , or for emergency.

Q: Have you come across a Zena, how the Zena use crystals?

Thor Han: Yes, many times. They use it as we all do to power devices.

Q: What are some of your favorite places to visit in this galaxy and why?

Thor Han: This is a personal question but this one I enjoy, and it is my pleasure to reply. My favorite place in the whole Nataru is my home planet Erra. If you ask me, there are worlds such as Andorra, Ognan and Nigshnish. These places are beautiful, and the inhabitants are very kind and interesting.

Q: Are they humanoid or weird looking? I mean weird to humans ?

Thor Han: We look weird to them who are non-humanoids. Every creature in this universe is beautiful, weirdness is ignorance.

Q: When your fleet encounters a civilization that has been enslaved like Earth, what is the strategy to assist them?

Thor Han: I report to my superiors at the Galactic Federation, Ardaana, but normally I do not do surveillance operations, I am just employed to look after this Star system, so if my fleet was to wander in deep space and report a civilization in danger of oppression, I shall report to my superior, and they shall decide at the council level.

Q: About the animals on the station.

Thor Han: They live in the greenhouses and the gardens. We imported life forms from our world. When you respect all life, all life loves you. If you are in the company of another life form, and you display respect then this other life form will respect you in turn.

The evolution of life forms is widespread, this galaxy hasn't got a certain level different from other levels in different galaxies, all life forms have different levels of evolution wherever they are, look only on your planet where everything is and the levels of communications between the beings in a species will determine the lower levels of evolution and after communication comes technology tools, and then the spirit, the religions and the spiritualities, and at the end everything blends into awareness.

Q: Have you been to other galaxies, How long does it take to go to another galaxy?

Thor Han: Yes, I have. We travel by interdimensional portals. It doesn't take long. There are these portals everywhere. We project a target and the portal is always set on the destination.

Q: Do Laan people display personality traits that could be considered cat-like?

Thor Han: They are highly evolved and intelligent beings, and they do not behave like animals,

they are masters in genetic and science, they have taught many people and civilizations, these arts of changing life and creating life, the Laan are very respectable, highly developed beings, if you wonder, if they behave like Terran cats, all I can say is that they are very graceful in their moves and kind.

Q: Have you incarnated in other star systems or have you always been a Pleiadian?

Thor Han: I have incarnated in different star systems, a few times on Terra, but I will not tell because this is private.

Q: What other planets do you like for their music?

Thor Han: Nhorr are my favorite, they use frequencies of sound that are animated with colors and holographic projections. They use crystals to create their music, they activate crystals of different shapes by powering them, and the crystals will radiate a vibration with a sound that will be a different note, and this will create music and harmonics, they play like this, and the crystals float by antigravity because they are surrounded by the field of energy in which they are projected.

Elena: *I actually saw that, he was playing this one day recently, when I went to visit him, there was a hologram of moving clouds and colors in his whole apartment and there were kind of modulated sounds, and it was changing the colors and moving slightly, and you could move in it, so the music was as well colors, light and holograms, it was beautiful. That's Nhorr, he confirms.*

Q: Tell me anything interesting about all your travels.

Thor Han: The food can be different and very interesting experiences but not only, what I like most is discovering new landscapes, new people and new cultures, I love to learn about how each other lives and the technology they use, the music they play and their music instruments, how do they create sound? How do they heal? What does love mean to them? Why do they hope? Why do they fear? What is their level of emotion, and what is their place in their spirit and in the universe? I am very curious, I do not have much time to visit places but later when I go, I will.

Q: Do you go by yourself or do you go with your fleet?

Thor Han: The fleet is assigned to the station. When I go on a mission I make sure to make a little detour to visit a world. If I have the authorization, that is when I can visit other places.

Q: Will you ever retire from service?

Thor Han: I will leave the military when this war is over. Because tonight we are speaking about lighter subjects, it is a break in my routine, but just know that outside the war is raging, and it is very severe and harsh.

Q: What hobbies on Earth are most common elsewhere and what hobbies are unique to Earth?

Thor Han: We have different ways of enjoying ourselves, listening to music and playing music is enjoyable, attuning to Source and universe is enjoyable also, this is what comes to my mind, playing games but very different from yours, games that trigger the mind and open and widen your consciousness.

Q: *Tell us about the planet Uranus. Are there any advanced ET species there?*

Thor Han: There are a lot of indigenous life forms and life forms imported and also an outpost of the Council of Five and the Federation. A ship gathers the two structures and is in a stationary position above the ground. We do not want to disturb the primitive life forms.

Q: *What does Jupiter look like, have you been there?*

Thor Han: You can see many pictures and photographs of Jupiter for yourselves in your internet but what I can tell that you haven't seen is what happens in the atmosphere, it is very tormented, extremely violent and lethal, the gases would kill your lifeforms, the storms would torn apart your ship, we have the technology to resist to these forces and toxic environments, this is not a good place nor an enjoyable place, the gravity is extremely important and high, without our technology you wouldn't survive a minute, even if you are in a ship, Jupiter is a terrible environment, not recommended.

Q: *Have you been to Inner Earth?*

Thor Han: I have been to an outpost of the Federation which I cannot disclose the location. Inner Earth is a web of underground places, cities and domains which are deeper than the network of tunnels used in the war.

Q: *About spiritual beliefs on other worlds.*

Thor Han: Religions are for civilizations of primitive level. When the awareness unfolds together with civilization advancement, religions reveal to only belong to a primitive set of mind, and religion ceases to exist in an advanced societal structure. All cultures, when they reach a certain level of consciousness, realize that religion is not a structure that is necessary, and they recognize the belonging to the same creator source which is the origin of all consciousness in all the universes, there are no gods, there are no prophets, there are no priests, there is no religion, there is no dogma, only the awareness to be connected all to each other and to be all a part of Imana - Source.

Q: *About aquatic planets.*

Thor Han: Some planets have underwater cities and cultures, but they are amphibians, so these cities do not consist of biodomes, it is all open, and the structures are houses and buildings where the people swim free. On these planets they have facilities where they welcome us, and we are both in our different environments, if we want to have interactions with locals we need to wear environmental suits.

Q: *On Saturn what is the large hexagonal shape that can be seen there?*

Thor Han: The gravity and the way it spins creates certain distortions in the clouds, it is due to

geometrical forces and sometimes the pole can form, with the difference of temperature, a hexagonal form that is typical of a difference of currents in the air and the atmosphere, at the contact of cold masses and hot masses, combined to a certain speed of spin. The type of large hexagonal shape on it that can be seen from far away at the poles.

Q: What types of governments do other planets have?

Thor Han: This is an infinite question to answer, it depends on the level of evolution of the structure of the society, some will have tribal societies, monarchies, empires. Then comes the age of federations and this is where we are, and there is no higher level above a federated structure.

Q: Tell us about Venus.

Thor Han: Venus is a little world where you wouldn't leave and stay for a second, let us say two seconds. You would be destroyed by the acidic atmosphere. Everyone on Venus lives in underground bases and under biodomes. Venus is composed of a shield of sulphuric acid which protects the environment from solar activity. The Taal mainly and the Ashkeru rule on Venus, we call it Naara, so the Naaru are a mix of different colonies, there is a council over all the cities and the colonies, and this council is a detachment of the Council of Five. The federated representative of these cities and colonies have gatherings on a mother ship in orbit of Naara. There is a rulership from the Council of Five and an outpost of the Federation, it is a federated world with representatives, one for each city, you would qualify them as prefects.

Q: Maybe you were here during Atlantis?

Thor Han: Yes, I was but not in this living form.

Elena: *Jen Han, his brother, asks if he can answer a question and Thor Han allows him. I am hearing him and seeing him, and Thor Han repeats my words to him.*

Q: Tell us about yourself, are you going to follow in Thor Han's footsteps and enrol the Federation?

Jen Han: I come from Erra, I was born there, I have artistic skills very much developed. I would like to enter the pilot academy but my brother says it is dangerous, so I will not do it because I know he loves me. This is the voice of his reason, he is very wise, and he knows better than me, so I will persevere in developing my creativity skills and learn about the arts of energies, how to sculpt the fabric of the universe into beautiful shapes and open portals in the void to create life forms of beauty. Thor Han says this is a lot of science learning, but I will learn. I am young and this is a passion, and then I can travel not as a pilot for the Federation but to see new worlds and other places. This is why I wanted to be here tonight to listen to the conversation of my brother. You only need to find the keys of decrypting the structure or the fabric of the universe, and when you have the codes you rearrange them to create materials and shapes and fields that can contain the material and create atmospheres and biosystems, life, and the rules of functioning of the universe can then be contained into a micro system such as a planet. I have learned how to form a star system, but I do not know yet how to form a

star, Manahu is the best place to learn about these things, so I am considering myself lucky to live there, it is an open school.

Elena: *Manahu it's how they call the Pleiades, a star cluster, it's stars in formation, so they can see the different stages, and they can train, that must be fascinating.*
